Keep a Clean Kitchen

To Get Rid of Refrigerator Odors
Keep a box of baking soda inside, but don’t use it for cooking! Change box every 3 months. Recycle the old one by pouring it down the sink to clean the sink!

To Get Rid of Microwave Odors
Microwave a microwave-safe glass of water with 2 TBSP lemon juice on “high” for 2 minutes.

To Get Rid of Odors in Plastic Containers
Soak in solution of 1 TBSP baking soda/1 c hot water.

When you cook – clean as you go, and clean up completely when finished! Let hard-to-wash dishes soak in hot water and soap, but don’t forget about them! Clean counters and stove tops too!
