Angular Unconformity

(overlain by Straw Point Volcanics in northern Fells)

- Nanepashemet Formation – dark greenish gray argillite + tuff + dark gray (basaltic) volcanic conglomerate/breccia, basal conglomerate with Virginia Wood Quartzite clasts.
- Winchester Granite – equigranular granite to granodiorite with relatively high mafics. Plagioclase subordinate to alkali feldspar or equal (also has Zagk xenolith like above).

Quartz Diorite Xenolith in Winchester Granite – medium grained quartz diorite xenoliths of unknown origin or age

Angular Unconformity

(overlain by basal breccia/conglomerate layers in Nanepashemet Formation)

- Virginia Wood Quartzite – metamorphosed and sheared, strong layer parallel foliation.

(Zwq) Quartzite Member - quartzite with many argillite intervals, top is last thick quartzite layer
