

Hygiene and Recare Module

Accessing Recare information in Axiom

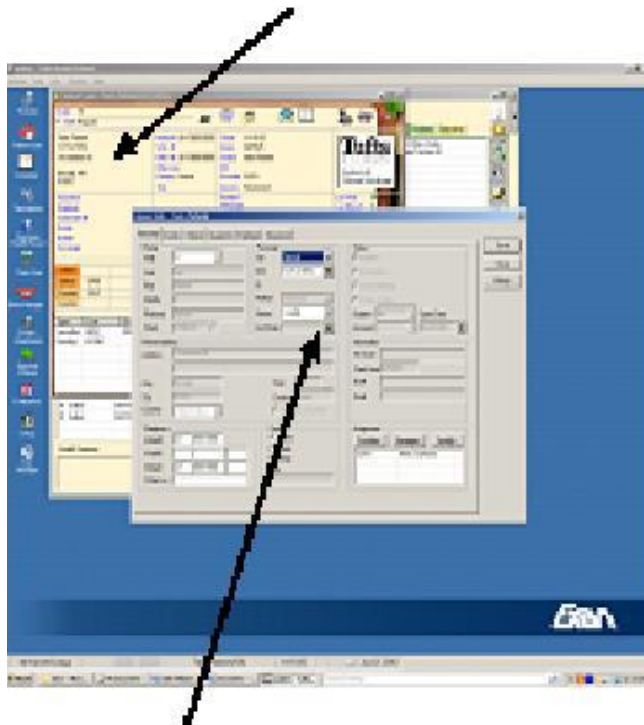

Mary Karish, DMD and Lorena Alex, DDS, CAGS, MSc

Choose patient from rolodex

Click on patient's name at bottom of EHR

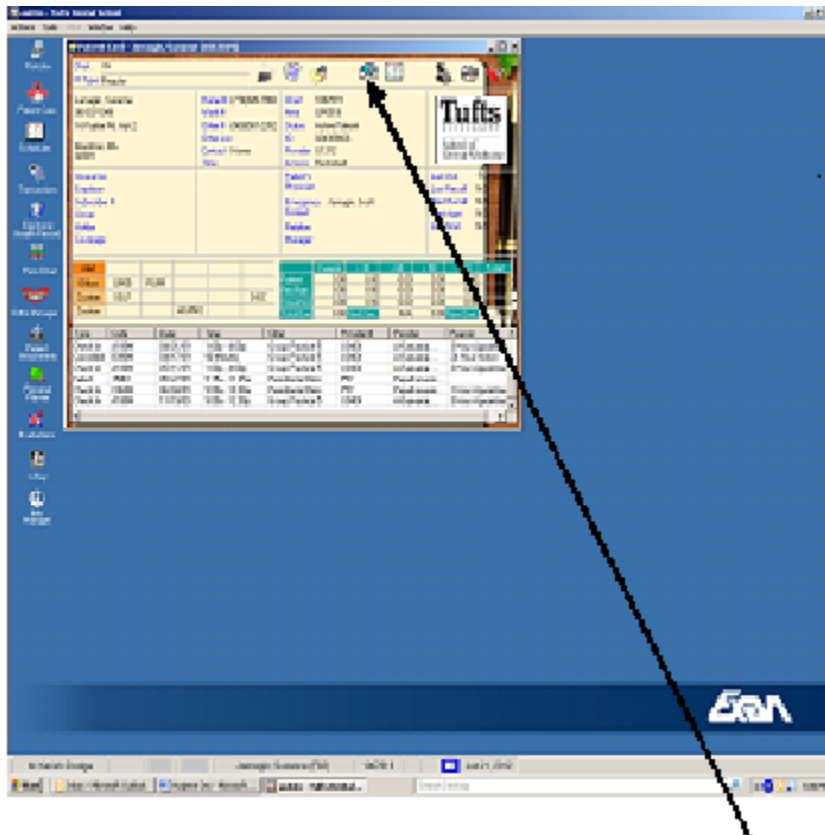

Click on Patient card.

Click on Status box:

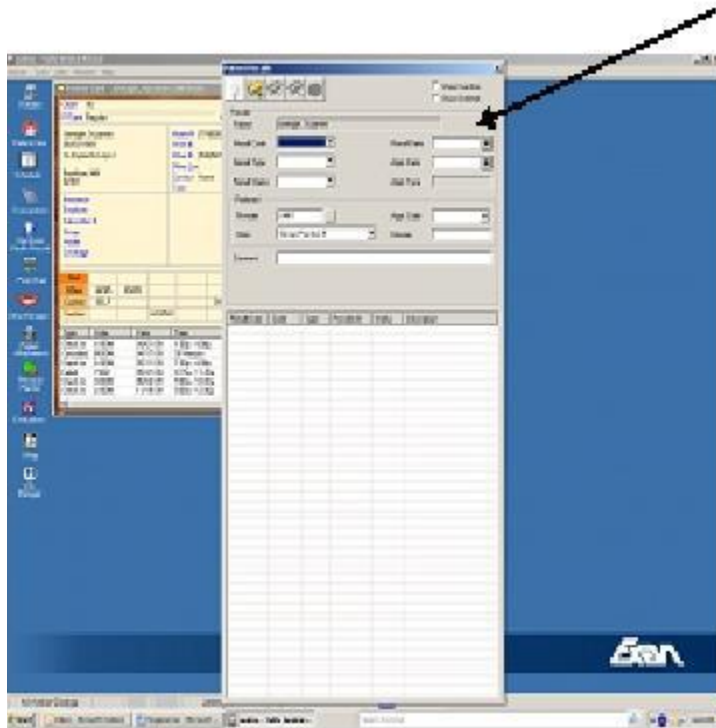

• There are 2 patient designations:

- ACTIVE- pts who are in treatment (ongoing restorations, prosthetics, periodontics, etc.) and need Recare appointments.
- RECARE- pts who have completed treatment to date and are only coming in for periodic prophylaxes/exams.

Return to patient card and click on Toothbrush icon to verify that the form is filled out properly.

Evaluate and/or populate the recall form as needed.

Recall recommendations (3 or 4 or 6 mo.) will be established according to the Periodontal Consultation recommendations and noted in the periodontal case notes or the most recent case notes.

All periodontal evaluation case notes will reflect the preferred interval of Recare in the Phase IV therapy recommendation.

Hygiene recall is mandatory for all applicable patients on a roster.

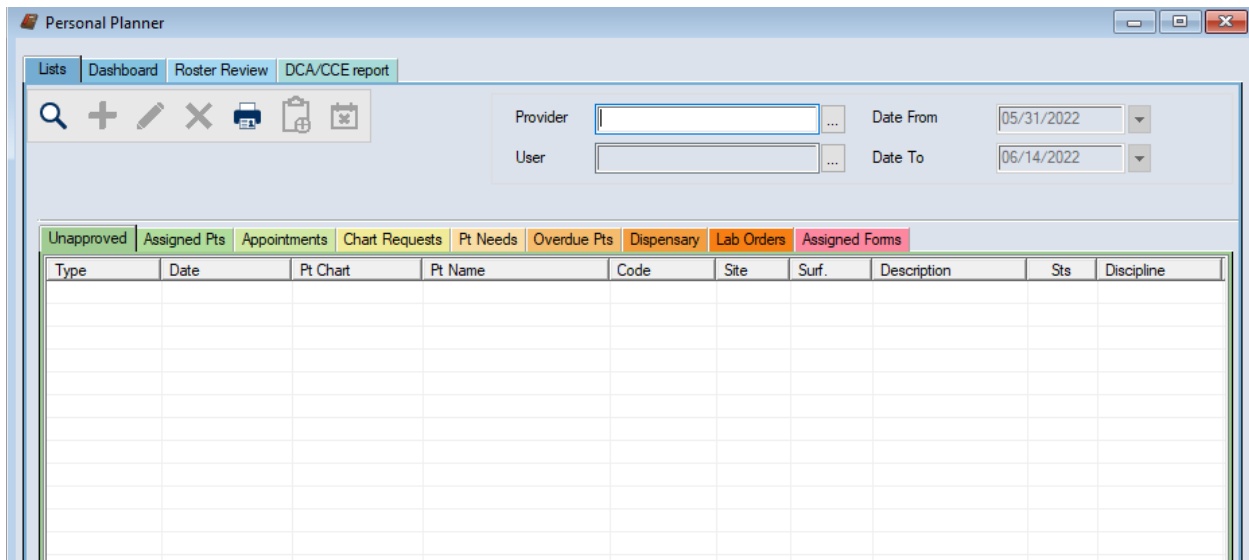

NOTE: Once the adult prophylaxis procedure (D1110, D1110.6, D1110.9, D4341, and D4342) or EXAM gets swiped to Complete the Axium Recall Module should “pop up”

Repopulate the recall info screen, if necessary, with recommended recall frequency. Note: TBS (to be scheduled) status is available initially.

A reminder of the appointment is found in the EHR within the TX History tab, at the bottom of the page in “green”.

During Roster Reviews, students and PCs can access the list of ACTIVE and RECALL patients.

Open Personal Planner and click on Roster Review tab

An additional report is available in the PC Info Manager site:

Go to Custom Reports, then click PC reports then click Overdue exam report

This report is a summary and is not accurate in “real time”. Student may have just scheduled an exam, or the patient was just recently assigned.
