

Some **pollinators**
to look for...

Ask me about my pollinator garden!

This garden was planted to support insect pollinators and other critical species in local food webs. Many pollinators visit flowers to drink nectar and collect pollen. Pollinator gardens contain pollinator-friendly plants of diverse shapes, colors, and sizes that bloom throughout the year.

If I'm not outside in the garden, feel free to reach out via:

Interested in how *you* can help pollinators?
